Abstract

The paper discusses the role of photovoltaics in current energy scenario work on a local, regional and global scale, for the mid 21st century.

Long-Term Scenarios for the Integration of Photovoltaics into the Global Energy System

Bent Sørensen

Roskilde University, Institute of Mathematics and Physics.
P.O.Box 260, DK-4000 Roskilde, Denmark

Abstract

The paper discusses the role of photovoltaics in current energy scenario work on a local, regional or global scale, for the mid-21st century.

1. Introduction

A number of recent or ongoing projects deal with planning options for energy efficiency and renewable energy supply, in Europe [1-3] and globally [4,5]. The study presented here specifically looks at the role of photovoltaics in such scenarios for the future.

Two types of scenarios are considered. One is a fair market scenario, which assumes that price distortions in the energy field are eliminated by including environmental and other externalities in the prices of different energy forms. The other is an ecologically sustainable scenario, that in principle may be continued indefinitely with no resource depletion or increase in environmental impacts. In both types of scenarios renewable energy sources may become primary sources of energy, and substantial amounts of photovoltaic power would be expected to be incorporated into such scenarios for a future dated so far ahead, that the expected lowering of PV production costs makes this technology meet the costs of conventional energy sources, augmented with social externality costs.

2. Brief description of scenarios used

Four scenarios proposed recently will be analysed in terms of their expectations for PV. Their key features are as follows:

2.1. Ecologically sustainable scenario

This scenario assumes on normative grounds, that future energy provisions will be based on a system that does not cause depletion of resources or irreversible alteration of our environment. The scenario was first constructed for the country of Denmark (and named the "dark green scenario" of the Technology Council Study [3]). The scenario requires Denmark to be selfsufficient in energy, and energy trade with neighbouring countries is not considered. The largest components are wind power and gaseous and liquid fuels derived from the large Danish agricultural sector, but also some solar heat and building-integrated PV are considered. The intermittency of the wind and solar inputs is dealt with by extensive use of reversible fuel cells and fuel stores, such that the backup is both from biofuels and from gas produced during periods of

high solar or wind power production and stored in underground caverns (for which several Danish locations are favourable). Substantial effort is made to lower energy demand by energy efficiency measures. The scenario for the year 2030 is depicted in Figure 1.

2.2. The fair market scenario

This is a scenario for the mid 21st century for the current 15 European Union countries [6], based on the assumption that market forces will introduce renewable energy, if the social costs of fossil and nuclear energy are considered (global warming, accidents, etc. [7,8]). These costs may be directly reflected in prices (by an environmental tax) or may be incorporated only in the decision processes. Photovoltaics is assumed to play an increasingly large role as one goes towards the Southern part of Europe, and in addition to building-integrated units, there are central installations on marginal land, e.g. in Spain, as well as energy trade with Middle Eastern and North African countries, replacing their current oil exports with a smaller volume of solar electricity export. Also wind and biomass are important ingredients in the scenarios, with varying shares in different countries, depending on resource estimates. Again, greatly improved energy efficiency is believed to be economical if the marked prices include externalities (this is the meaning of the term "fair" market). Figure 2 shows the overall European energy scenario for the year 2050, with Figure 5 showing the transition in energy supply. The penetration of PV in each country is given in Table 1.

2.3 Decentralized renewable energy scenario

This is similar to the sustainable scenario but assumes a decentralized development of activities in society, which in terms of preferred energy systems means building-integrated PV and dispersed wind turbines, but no central solar receivers or large wind parks. The scenario is a global one, for which the regional distribution of sources is under investigation. The challenge associated with the decentralized paradigm is to determine a mix of locally available energy sources that will fulfill demand while minimizing energy trade (not eliminate it, as there will still be transmission grids interconnecting countries and regions, e.g. for electricity). The draft summary of the 2050 scenario is depicted in Figure 3 [5].

2.4. Centralized renewable energy scenario

This global scenario differs from the previous by allowing centralized PV installations in solar-favoured regions and thus more trade and transmission. Thereby it becomes possible to diminish the use of biomass in the energy sector, which is seen as a response to the quest for a sustainable agricultural practice, where agricultural land is not degraded or polluted by pesticides. The draft scenario summary is presented in Figure 4 [5]. The assumption of a 1 kW/cap. demand for the two global scenarios is fulfilled by combining a near full satisfaction of primary and secondary needs in all parts of the world with a high conversion efficiency from production through conversion all the way to the end-use.

3. PV penetration

Table 1 lists the penetrations of PV technology assumed in each scenario, and for the European scenario for each country. A calculation of potential production on suitably oriented rooftops and building facades was made on the basis of detailed building statistics in Denmark and Germany. In one region of Germany, the orientation and shade effects were assessed in further detail, and

the results extrapolated to other regions of Europe on the basis of population density [9]. The fraction of the calculated potential actually used in the scenarios varies from 10 to 78%, as indicated in Table 1. The smallest penetrations are for high-latitude areas, while the largest penetrations are in sunny and clear regions. The values quoted for these regions, although smaller than the building-based potential, in practice include stand-alone systems. The installed collector area is given relative to the total land surface, as well as to population. Further, Table 1 gives the production per m^2 of collector, as an indication of the solar regime, as well as per capita. The system efficiency by 2050 is assumed to be 15%. As illustrated in Figure 6, penetration is high in suitably located areas with high building density, but also in sunny areas with much marginal land (e.g. Spain and Greece), despite a lower population density. Finally, Table 1 gives the fraction of the total scenario production of electricity, that is derived from PV. For the European scenarios, this fraction is low except for the Mediterranean countries, while for the global scenarios, it is considerably higher. This reflects that a large portion of world population lives in areas with high levels of solar radiation, and that other renewable sources such as wind are less prominent in these regions than in European coastal areas.

4. Conclusions

It is seen that many in the current generation of "greenhouse warming mitigation" scenarios place faith in the photovoltaic development. Of course, there are other scenarios emphasizing safe nuclear or clean fossil solutions [5]. The interesting common feature is, that expectations of rational energy use makes it possible to choose renewable energy scenarios with a very high share of PV, without encountering serious constraints from land use. In fact, even the most ambitious PV scenarios can be accommodated using only part of the building-based potential surface area.

- 301/95 TOK Modellering af træers vækst under påvirkning
af ozon
af: Glenn Møller-Holst, Marina Johannessen, Birthe
Nielsen og Bettina Sørensen
Vejleder: Jesper Larsen
- 302/95 KOMPRESSORER - Analyse af en matematisk model for
aksialkompressorer
Projektrapport sf: Stine Bøggild, Jakob Hilmer,
Pernille Postgaard
Vejleder: Viggo Andreasen
- 303/95 Masterlignings-modeller af Glasovergangen
Termisk-Mekanisk Relaksation
Specialerapport udarbejdet af:
Johannes K. Nielsen, Klaus Dahl Jensen
Vejledere: Jeppe C. Dyre, Jørgen Larsen
- 304a/95 STATISTIKNOTER Simple binomialfordelingsmodeller
af: Jørgen Larsen
- 304b/95 STATISTIKNOTER Simple normalfordelingsmodeller
af: Jørgen Larsen
- 304c/95 STATISTIKNOTER Simple Poissonfordelingsmodeller
af: Jørgen Larsen
- 304d/95 STATISTIKNOTER Simple multinomialfordelingsmodeller
af: Jørgen Larsen
- 304e/95 STATISTIKNOTER Mindre matematisk-statistisk opslagsværk
indeholdende bl.a. ordforklaringer, resuméer og
tabeller
af: Jørgen Larsen

- 305/95 The Maslov Index:
A Functional Analytical Definition
And The Spectral Flow Formula

By: B. Booss-Bavnbek, K. Furutani
- 306/95 Goals of mathematics teaching

Preprint of a chapter for the forthcoming International Handbook of Mathematics Education (Alan J. Bishop, ed)

By: Mogens Niss
- 307/95 Habit Formation and the Thirdness of Signs

Presented at the semiotic symposium

The Emergence of Codes and Intensions as a Basis of Sign Processes

By: Peder Voetmann Christiansen
- 308/95 Metaforer i Fysikken

af: Marianne Wilcken Bjerregaard, Frederik Voetmann Christiansen, Jørn Skov Hansen, Klaus Dahl Jensen, Ole Schmidt

Vejledere: Peder Voetmann Christiansen og Petr Viscor
- 309/95 Tiden og Tanken

En undersøgelse af begrebsverdenen Matematik udført ved hjælp af en analogi med tid

af: Anita Stark og Randi Petersen

Vejleder: Bernhelm Booss-Bavnbek
- 310/96 Kursusmateriale til "Lineære strukturer fra algebra og analyse" (E1)

af: Mogens Brun Heefelt
- 311/96 2nd Annual Report from the project
LIFE-CYCLE ANALYSIS OF THE TOTAL DANISH ENERGY SYSTEM

by: Hélène Connor-Lajambe, Bernd Kuemmel, Stefan Krüger Nielsen, Bent Sørensen
- 312/96 Grassmannian and Chiral Anomaly

by: B. Booss-Bavnbek, K.P. Wojciechowski
- 313/96 THE IRREDUCIBILITY OF CHANCE AND THE OPENNESS OF THE FUTURE

The Logical Function of Idealism in Peirce's Philosophy of Nature

By: Helmut Pape, University of Hannover
- 314/96 Feedback Regulation of Mammalian Cardiovascular System

By: Johnny T. Ottesen
- 315/96 "Rejsen til tidens indre" - Udarbejdelse af a + b et manuskript til en fjernsynsudsendelse + manuskript

af: Gunhild Hune og Karina Goyle

Vejledere: Peder Voetmann Christiansen og Bruno Ingemann
- 316/96 Plasmaoscillation i natriumklynger

Specialerapport af: Peter Meibom, Mikko Østergård

Vejledere: Jeppe Dyre & Jørn Borggreen
- 317/96 Poincaré og symplektiske algoritmer

af: Ulla Rasmussen

Vejleder: Anders Madsen
- 318/96 Modelling the Respiratory System

by: Tine Guldager Christiansen, Claus Dræby

Supervisors: Viggo Andreassen, Michael Danielsen
- 319/96 Externality Estimation of Greenhouse Warming Impacts

by: Bent Sørensen
- 320/96 Grassmannian and Boundary Contribution to the -Determinant

by: K.P. Wojciechowski et al.
- 321/96 Modelkompetencer - udvikling og afprøvning af et begrebsapparat

Specialerapport af: Nina Skov Hansen, Christine Iversen, Kristin Troels-Smith

Vejleder: Morten Blomhøj
- 322/96 OPGAVESAMLING

Bredde-Kursus i Fysik 1976 - 1996
- 323/96 Structure and Dynamics of Symmetric Diblock Copolymers

PhD Thesis

by: Christine Maria Papadakis
- 324/96 Non-linearity of Baroreceptor Nerves

by: Johnny T. Ottesen
- 325/96 Retorik eller realitet ?

Anvendelser af matematik i det danske Gymnasiums matematikundervisning i perioden 1903 - 88

Specialerapport af Helle Pilemann

Vejleder: Mogens Niss
- 326/96 Bevist teori

Eksemplificeret ved Gentzens bevis for konsistensen af teorien om de naturlige tal

af: Gitte Andersen, Lise Mariane Jeppesen, Klaus Frovin Jørgensen, Ivar Peter Zeck

Vejledere: Bernhelm Booss-Bavnbek og Stig Andur Pedersen
- 327/96 NON-LINEAR MODELLING OF INTEGRATED ENERGY SUPPLY AND DEMAND MATCHING SYSTEMS

by: Bent Sørensen
